

ABSTRACT

Disclosed is a composition comprising an aqueous phase; a silicone oil phase; and guanine, wherein the guanine is at the interface of the aqueous and silicone oil phases; and, optionally, one or more of the following ingredients: (i) pigment; (ii) dye; (iii) fragrance; (iv) emollient; (v) second silicone oil; (vi) glycol; (vii) vitamin; (viii) sun screen; (ix) sanitizing agent; and (x) acne treatment agent. Also disclosed is a spray assembly comprising (a) a container comprising a transparent wall and a pump assembly, which is optionally fluorinated, extending from the wall; (b) a liquid composition comprising a region containing pearlized oil droplets; and (c) a fluorinated dip tube extending from the pump assembly into the region of pearlized oil droplets of the composition. Further disclosed is a spray assembly comprising (a) a container comprising a transparent wall and a pump assembly extending from the wall; (b) the above composition; and (c) a dip tube extending from the pump assembly into a region comprising the guanine-containing silicone oil phase oil.
